

Cam Hospital®

***MANUFACTURING OF CUSTOMIZED
PROCEDURE PACKS***

Established in 1986, the CAM HOSPITAL S.R.L. manufactures medical devices of the latest generation.

Present in the medical field with the will to progress and provide considerable support for evolution of hospital techniques through studies and designs of disposable medical devices.

Over the years, It has launched new production lines of medical devices to meet various needs in the field of surgical procedures, also providing the opportunity of customization, with the primary aim of creating more and higher quality products.

The company's quality management system and the advanced manufacturing systems are the guarantee of reliability.

The company has obtained since 1998 EC mark by health superior institute and UNI EN ISO 9001: 2008 by TUV.

The production factory is 3,200 square meters. It is made with modern technological systems, designed for the production of medical devices, with "CLEAN ROOMS" builded according the regulations governing the contamination control area.

The products are manufactured in compliance with Italian and European regulations governing the production processes (ISO 9002) and specially the production of health products and medical devices (EN 46002). The plants, production Systems and the products manufactured by Cam Hospital comply with the Directive 93/42 / EEC of the Council of 06.14.93.

PRODUCTION'S EQUIPMENT

- *Automatic machines for laying, for cutting and for processing woven, gauzes and dressings.*
- *Industrial sewing machines for manufacturing disposable sanitary clothing.*
- *Machine for molding of plastics for manufacturing disposable instruments.*
- *Punching machines and riveting of adaptable use.*
- *Automatic machines for in-line packaging of health and specialized articles.*

PACKING'S METHODS

For manufacturing the kits and for packaging the medical items they are generally used automatic packaging machines that make, from a leaf of polythene, a blister; the workers in clean room put the devices inside the blister that, than, is automatically sealed with medical paper. On the package are automatically imprinted all the mandatory instruction and symbols necessary.

INNOVATION RESEARCH AND DEVELOPMENT

The UNI EN 13795 has defined European standards, establishing the essential requirements that the fabrics for the operating room must meet, springing from it, a set of rules that are now the basis reference for the CAM HOSPITAL for technology solutions that meet the security requirements, costs and environmental impact. Considering the requirements dictated by the standard, the cotton in the operating room should be avoided, since the material is not safe for either patient or operator.

SERVICES

The CAM HOSPITAL is the professional, innovative and reliable partner able to support the health facility during his continue growing towards excellence. Any need is analysed and studied in partnership with the client, configuring and customizing all surgical procedures.

MANUFACTURING

The CAM HOSPITAL for manufacturing the procedure packs has achieved, as a result of studies and analysis, certified fabrics that for their own characteristics and performance requirements are in compliance with European standard EN13795. Biocompatible for surgical use, non-allergenic, flammability class I, comply with incineration causing no toxic residues.

Surgidrape® is the non-woven spunbonded drapes' line, obtained from the fusion of the hydrophilic polypropylene polymer, consisting of a layer of fibres bounded together, the fabric laminate of several layers with thermal process is structured to allow the passage of molecules steam and promote breathing, the fabric obtained, is subsequently drilled improving the softness. Water-repellent, antimicrobial barrier, anti-static, anti-reflective and stable colour, alcohol repellent, breathable, high mechanical strength in both longitudinal and transverse. According to the user's requirements are made with fenestration, incision film, adhesive areas, fluid collection pouches, instrument pouches, grommets, and more. Folded in compliance with aseptic technique.

DRAPES AND SHEET

Made of:

- 2-layered fabric; it is a layer of non-woven spunbonded of polypropylene (SPP) HOT-MELT laminated to polythene (PP);
- 3-layered fabric; it is a layer of non-woven spunbonded of polypropylene laminated to polythene laminated to a further layer of polypropylene
- SMMS fabric (4-layered); it are two outer layers of non-woven spunbonded bonded to two inner layers of meltblown.

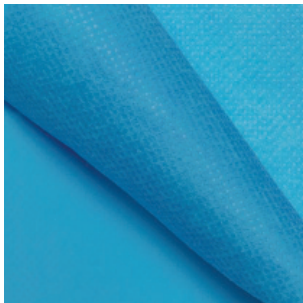

CUSTOM PACK ADVANTAGES

- Time saving for arranging the surgical field, ensuring asepsis.
- Waste reduction from packaging.
- Reduction of warehouse storage.
- Reduction of several devices' management.
- Traceability of the various components used.
- Definite cost for each surgery.

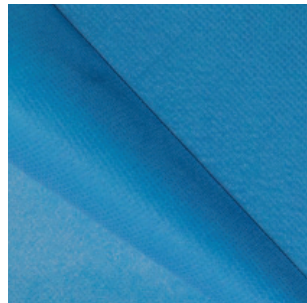

SAFETY

The custom sheets and the custom procedure packs, cut off the risk of infections in the operating room, both with regard to the risks for the patient and for the operator as such as related costs for the onset of the same.

BVB SURGICAL GOWN

The outer layer provides water repellency and resistance. The inner layer is soft and comfortable when worn during long surgical procedures. The barrier layer is a membrane that has a monolithic structure, non-porous which provides an impenetrable barrier, thus blocking the passage of bacteria and viruses, and provides significantly a barrier to all types of fluids. The film structure allows the release of water vapor, allowing to users to remain comfortable during the surgical procedure and providing, at the same time, the highest level of protection. Designed to exceed the criteria of AAMI PB 70 Level 4 and high performance.
